3.1 File List

Here is a list of all files with brief descriptions:

Chapter 4

Namespace Documentation

4.1 vaso Namespace Reference

contains functions related to the file I/O use in this program

Enumerations

- enum Side { Side::Left, Side::Right }

Functions

- std::string CurrentDataName ()
- std::string InitialDataName (auto dir)
- std::string PatientName ()
- DataParams ReadParams (auto filename)
- std::string WriteParams (DataParams params, auto filename)
- std::map< DataParams > Process (float32 ∗data, uint8 recCount, uint32 sampleCount, uint32 sampleFreq, uint8 ∗counter)
- void absolute (float32 ∗data, uint32 size)
- float32 average (float32 ∗data, uint32 size)
- DataParams average (DataParams ∗params, uint8 size)
- void average (float32 ∗data, float32 ∗avg, uint8 count, uint32 size)
- void decibels (float32 ∗data, uint32 size)
- void diff (float32 ∗data, uint32 size)
- void fft (cfloat32 ∗data, uint32 size)
- void mag (cfloat32 ∗orig, float32 ∗newmags, uint32 size)
- Maximum max (float32 ∗data, uint32 size)
- void smooth (float32 ∗data, uint32 size, uint16 order)
- void play (auto filename)

Variables

- const std::string PATIENT_PATH = "/home/pi/patients/"

4.1.1 Detailed Description

contains functions related to the file I/O use in this program

contains the function(s) relating to sound

contains the functions necessary to perform the mathematical operations required by this program

contains function()s related to the program's threaded processing of audio data

This namespace contains all code related to this project.

4.1.2 Enumeration Type Documentation

4.1.2.1 enum **vaso::Side** [strong]

The side of the head to which a recording pertains.

Enumerator

Left

Right

Definition at line 61 of file definitions.hpp.

4.1.3 Function Documentation

4.1.3.1 void vaso::absolute (**float32** ∗ *data,* **uint32** *size*)

Ensures all elements in an array are positive. Note that this function replaces array elements if necessary. It does not populate a new array.

Parameters

data	the array whose elements must all be positive
size	the number of elements in the data array

Definition at line 141 of file sigmath.hpp.

Here is the caller graph for this function:

4.1.3.2 **float32** vaso::average (**float32** ∗ *data,* **uint32** *size*)

Takes the average of all elements in an array

Parameters

data	the array from which to compute the average
size	the number of elements in the data array

Returns

the computed average

Definition at line 145 of file sigmath.hpp.

Here is the caller graph for this function:

4.1.3.3 DataParams vaso::average (DataParams ∗ *params*, uint8 *size*)

Finds the averages of the elements of an array of DataParams.

Parameters

params	the DataParams array
size	the number of elements in the DataParams array

Returns

a DataParams structure containing the average values of the structure's elements in the params array

Definition at line 149 of file sigmath.hpp.

4.1.3.4 void vaso::average (float32 ∗ *data*, float32 ∗ *avg*, uint8 *count*, uint32 *size*)

Element-wise averaging along the first dimension of a two-dimensional array.

Parameters

data	the two-dimensional array containing [count] number of arrays in the first dimension and [size] number of each elements in the second dimension
avg	the array of size [size] containing the averaged values of each element
count	the number of arrays in the first dimension of data and will likely be a constant value of 3 in this program
size	the number of elements in the second dimension of data

Definition at line 153 of file sigmath.hpp.

4.1.3.5 std::string vaso::CurrentDataName ( )

Gets a data-based name to which the file(s) created in a session to be saved.

Returns

a partial (?) filename for the current session

Definition at line 26 of file fileio.hpp.

4.1.3.6 void vaso::decibels (float32 ∗ *data,* uint32 *size*)

Converts an array of floats to "power decibels", i.e., x[n] = 20∗log10(x[n]). The decibel values are written to the same array that contained the values to be converted. In other words, this function should perform an in-place, element-wise conversion.

Parameters

data	the array of values to be converted as well as the location where the converted values will be written
size	the number of elements in the data array

Definition at line 157 of file sigmath.hpp.

Here is the caller graph for this function:

4.1.3.7 void vaso::diff (float32 ∗ *data,* uint32 *size*)

Computes the left-handed first derivative of a discrete signal. The first element will be 0.

Parameters

data	an array containing the discrete signal data
size	the number of elements in data

Definition at line 163 of file sigmath.hpp.

Here is the caller graph for this function:

4.1.3.8 void vaso::fft (cfloat32 ∗ *data,* uint32 *size*)

Replaces the values of an array of cfloat32's with the array's DFT using a decimation-in-frequency algorithm.

This code is based on code from http://rosettacode.org/wiki/Fast_Fourier_transform#C.↵ 2B.2B.

Parameters

data	the array whose values should be replaced with its DFT
size	the number of elements in the data array

Definition at line 167 of file sigmath.hpp.

Here is the caller graph for this function:

4.1.3.9 std::string vaso::InitialDataName (auto *dir*)

Finds the filename of the oldest (i.e., baseline) data is saved.

Parameters

dir	the directory which contains all patient data

Returns

the base (?) filename to which all baseline data was saved

Definition at line 37 of file fileio.hpp.

4.1.3.10 void vaso::mag (cfloat32 ∗ *orig,* float32 ∗ *newmags,* uint32 *size*)

Computes the magitude of an array of complex numbers.

Parameters

orig	the array of complex numbers
newmags	an array to which the magitudes are to be written
size	the number of elements in orig and newmags

Definition at line 215 of file sigmath.hpp.

Here is the caller graph for this function:

4.1.3.11 Maximum vaso::max (float32 $*$ *data,* uint32 *size*)

Finds the maximum value in an array.

Parameters

data	the array whose maximum value is to be found
uint32	size the number of elements in the data array

Returns

the maximum value and its index in a Maximum structure

Definition at line 219 of file sigmath.hpp.

Here is the caller graph for this function:

4.1.3.12 std::string vaso::PatientName ( )

Prompts a user to enter a first, middle, and last name for a patients and creates a directory (if necessary) in which all of a patient's data can be saved.

Must warn a user if the patient folder does not already exist in order to prevent missaving data.

Returns

the directory under which all patient data is saved

Definition at line 51 of file fileio.hpp.

4.1.3.13 void vaso::play (auto *filename*)

Plays a WAVE file in a loop in a non-blocking manner.

Parameters

filename	the absolute or relative path to the WAVE file

Definition at line 19 of file sound.hpp.

4.1.3.14 std::map$<$DataParams$>$ vaso::Process (float32 $*$ *data,* uint8 *recCount,* uint32 *sampleCount,* uint32 *sampleFreq,* uint8 $*$ *counter*)

Processes the recorded audio. Meant to be run in a separate thread as the recordings are being made. This function assumes that the left-side recordings will be made first.

data two-dimensional array (first dimension whole recordings, second dimension samples in a recording) that will contain all recorded audio

recCount the number of recordings (left and right together) to be made

Parameters

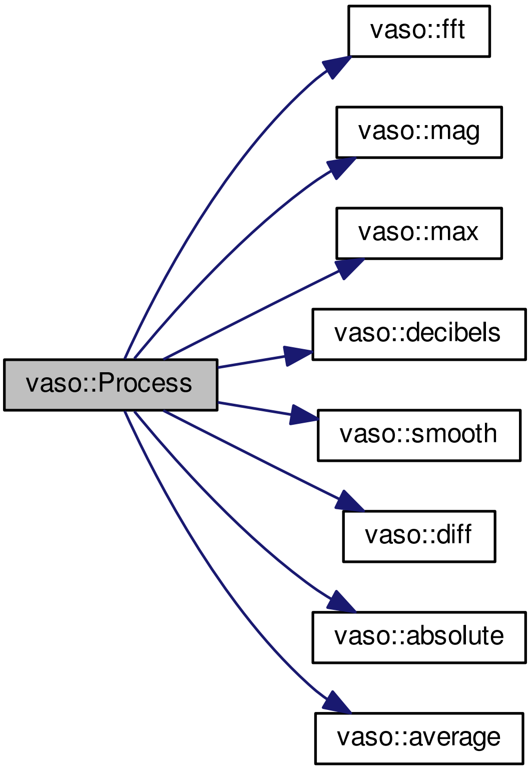
sampleCount	the number of samples in each recording. MUST be a power of two.
sampleFreq	the sampling frequency in Hz or Samples/second
counter	pointer to an index denoting which recording is currently in progress

Returns

a map of the averaged left- and right-side parameters in DataParams structures

Definition at line 40 of file process.hpp.

Here is the call graph for this function:



4.1.3.15 DataParams vaso::ReadParams (auto *filename*)

Reads the previously computated parameters found in the specified file.

Parameters

filename	the absolute or relative path to the file containing the patient data to read

Returns

the patient parameters read

Definition at line 64 of file fileio.hpp.

4.1.3.16 void vaso::smooth (float32 ∗ *data,* uint32 *size,* uint16 *order*)

Applies an nth-order moving-average filter to a discrete signal.

Parameters

data	the array containing the signal to which the filter should be applied
size	the number of elements in the data array
order	the order of the filter

Definition at line 223 of file sigmath.hpp.

Here is the caller graph for this function:

4.1.3.17 std::string vaso::WriteParams (DataParams *params,* auto *filename*)

Writes the parameters to the specified file.

Parameters

params	

Definition at line 73 of file fileio.hpp.

4.1.4 Variable Documentation

4.1.4.1 const std::string vaso::PATIENT_PATH = "/home/pi/patients/"

Absolute path to the folder containing the patients' data

Definition at line 18 of file fileio.hpp.

Chapter 5

Class Documentation

5.1 DataParams Struct Reference

```
#include <definitions.hpp>
```

Public Attributes

- float32 freq
- float32 nois

5.1.1 Detailed Description

A structure containing the calculated results from processing the audio recordings.

Definition at line 40 of file definitions.hpp.

5.1.2 Member Data Documentation

5.1.2.1 float32 DataParams::freq

Definition at line 41 of file definitions.hpp.

5.1.2.2 float32 DataParams::nois

Definition at line 42 of file definitions.hpp.

The documentation for this struct was generated from the following file:

- src/definitions.hpp

5.2 Maximum Struct Reference

```
#include <definitions.hpp>
```

Public Attributes

- float32 value
- uint32 index

5.2.1 Detailed Description

Contains the maximum value found in an array and the value's index in that array.

Definition at line 49 of file definitions.hpp.

5.2.2 Member Data Documentation

5.2.2.1 uint32 Maximum::index

Definition at line 51 of file definitions.hpp.

5.2.2.2 float32 Maximum::value

Definition at line 50 of file definitions.hpp.

The documentation for this struct was generated from the following file:

- src/definitions.hpp

Chapter 6

File Documentation

6.1 bin/start File Reference

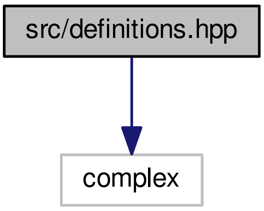
6.2 etc/doxygen.config File Reference

6.3 makefile File Reference

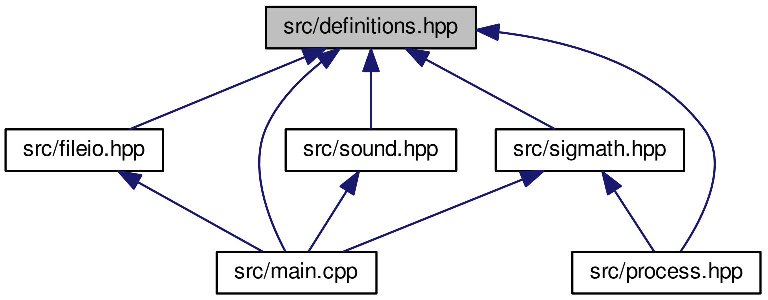
6.4 src/definitions.hpp File Reference

```
#include <complex>
```

Include dependency graph for definitions.hpp:



This graph shows which files directly or indirectly include this file:



Classes

- struct DataParams
- struct Maximum

Namespaces

- vaso

  contains functions related to the file I/O use in this program

Macros

- #define ENUM signed char

  Contains declarations of system-independant (universal size) integers and float types, shortened type names for some commonly used types, and enumerations.

Typedefs

- typedef unsigned char byte
- typedef unsigned char uint8
- typedef signed char sint8
- typedef unsigned short uint16
- typedef signed short sint16
- typedef unsigned int uint32
- typedef signed int sint32
- typedef unsigned long long uint64
- typedef signed long long sint64
- typedef float float32
- typedef double float64
- typedef std::complex< float32 > cfloat32

Enumerations

- enum vaso::Side { vaso::Side::Left, vaso::Side::Right }

6.4.1 Macro Definition Documentation

6.4.1.1 #define ENUM signed char

Contains declarations of system-independant (universal size) integers and float types, shortened type names for some commonly used types, and enumerations.

Author

Samuel Andrew Wisner, awisner94@gmail.com

Definition at line 13 of file definitions.hpp.

6.4.2 Typedef Documentation

6.4.2.1 typedef unsigned char byte

Definition at line 15 of file definitions.hpp.

6.4.2.2 typedef std::complex<float32> cfloat32

Defines a type for complex float32's.

Definition at line 34 of file definitions.hpp.

6.4.2.3 typedef float float32

Definition at line 28 of file definitions.hpp.

6.4.2.4 typedef double float64

Definition at line 29 of file definitions.hpp.

6.4.2.5 typedef signed short sint16

Definition at line 20 of file definitions.hpp.

6.4.2.6 typedef signed int sint32

Definition at line 23 of file definitions.hpp.

6.4.2.7 typedef signed long long sint64

Definition at line 26 of file definitions.hpp.

6.4.2.8 typedef signed char sint8

Definition at line 17 of file definitions.hpp.

6.4.2.9 typedef unsigned short uint16

Definition at line 19 of file definitions.hpp.

6.4.2.10 typedef unsigned int uint32

Definition at line 22 of file definitions.hpp.

6.4.2.11 typedef unsigned long long uint64

Definition at line 25 of file definitions.hpp.

6.4.2.12 typedef unsigned char uint8

Definition at line 16 of file definitions.hpp.

6.5 src/fileio.hpp File Reference

```
#include <iostream>
#include <string>
#include "definitions.hpp"
```

Include dependency graph for fileio.hpp:
